# enlighten

You have a strong creative side and are keen to let your ideas come to life without any fuss?

The enlighten overlock machine offers you numerous features that will greatly facilitate your work. Say goodbye to any manual fine adjustment of the thread tension. The differential feed system lets you stretch or pucker your fabric or gather it as you like. You can use four threads simultaneously to produce fanciful decorative effects. No need to laboriously follow any threading points. Forget about loose threads and all the associated tangle and frustration. All thanks to the fully automated jet-air threading system. You now have much more time to try out the numerous stitch options and vary both the stitch length and width. The enlighten easily takes you to a neat and precise result.

... convinces both beginners and professionals

The baby lock brand has been appreciated for its ease of use for decades. Both beginners and advanced sewers can enjoy the machines' special technical features and all of the possibilities they offer right from the very start. Whether the direct start or the different setting variants, everybody loves the outstanding sewing results irrespective of the fabric and thread used.

## Why a baby lock?

All of the innovations that come with the baby lock machines combine clever and high-quality mechanical features. The machines do not require any computer technology, making them less prone to faults and extremely durable, and thus guaranteeing long-lasting sewing happiness.

The world's first overlock machine that was developed for household use was a baby lock. From the very beginning, the motto was: We at baby lock deliver only the highest quality to our customers, made in Japan. baby lock does not rely on mass production, making this product something very special.

Our machines are produced in a craft-like manufacturing facility in the north of Japan. The staff test every single machine for 20 minutes. More than 30 different seams are sewn to guarantee the high quality demands placed on this product before it is delivered to our customers.

The very important and sensitive loopers are polished, inspected, tested and fine tuned by hand. The aforementioned processes are only some examples of the many individual operations that are performed by our highly specialised staff.

MADE IN  
JAPAN

# Do you already have an overlocker? Why not give it a try!

## *A harmonious pair ...*

Thanks to the small gap between the needle and cutter, it is much easier to produce perfect curves on the enlighten. When changing the stitch width, the chaining finger and cutter move together, preventing the protruding fabric from puckering. And the stitches do not extend over the fabric edge either. Your sewing work shows neat and precise stitches.

## *All off the features at a glance ...*

baby lock fans appreciate the controls' comfortable position. The dials are located alongside each other close to the sewing area. This means that you do not have to turn away from your sewing work to adjust the desired stitch variations. Your hands stay where they should be, on the fabric! The likelihood of the fabric moving unintentionally is thus reduced to a minimum.

## *Realise your ideas with ease and fun!*

Working with needle and thread requires a steady hand, a practised eye and a lot of patience when it comes to threading. This step is so difficult for some beginners that it takes the fun out of sewing, even before they try to work on their first piece of fabric.

There's a much better way! Our sophisticated ExtraordinAir™ threading system solves this problem on its own, at the touch of a button with a jet of air. Off you go!

## *Experience infinite refinement ...*

Creative ideas can only develop where there is enough free space for them to unfold.

Sewing is a handicraft that offers you a high degree of individuality and lets you discover artistic diversity through an exchange with other sewing enthusiasts. This is exactly what we want to encourage!

We offer a versatile tool for any type of fabric. Thanks to the automatic thread delivery (ATD) system, even handling difficult fabrics becomes child's play as the machine always provides the correct setting to achieve an optimum sewing result. The thread quality is irrelevant. Whether a sturdy yarn or an ultra-thin thread, the seams look neat. Our baby lock machine's special highlight is the wave seam. This decorative stitch is a real eye-catcher if you use threads in different colours.

*This unaccustomed comfort will inspire your imagination ...*

*User-friendly operation*

Gerd tells us about the *enlighten* from baby lock:  
 „The machines are so strong and sturdy, and they are built to the highest standards.“
