

HOBBY CHAIR

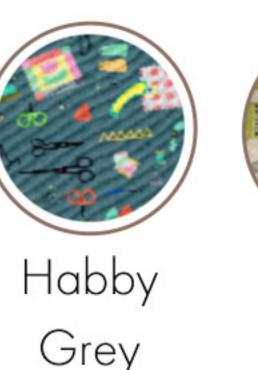

Enjoy optimum comfort with our Hobby Chair, packed with adjustable features to ensure you sit well every day.

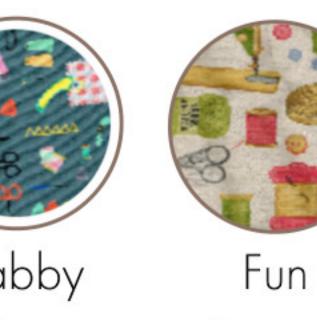

As any hobbyist will tell you the most important things you'll need when sitting for long periods is comfort, good support and a correct sitting posture. The Horn Hobby Chair offers all these and more. Featuring a 3 lever mechanism you can easily adjust your sitting position by changing the height, rake, seat tilt and back height positions...just like a luxury car seat.

The Horn Hobby Chair features a sculptured, deep, luxuriously padded seat and back with an approved contoured lumbar support to fit perfectly to your body. It can be quickly raised or lowered to your desired position by means of an air assisted elevator and is fitted with a smaller castor base to allow you to fit easily into your sewing cabinet.

TALL HOBBY CHAIR

Recommended for taller pieces such as HI-LO Mk-2, Sewers Vision, Maxi Hobby table, Cut easy Mk-2 and the new Compact Hi-Lo!

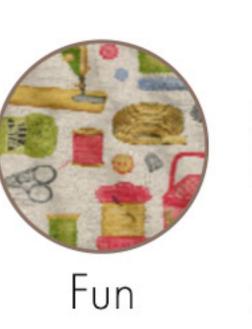

All of the features of the Hobby Chair, but taller! This chair isn't specifically for tall people, we have developed it so that you are able to sit at either a sewing cabinet height of (approx. 29-30ins) or sit at a standing height surface of (approx. 35-36 ins) but we realise that people are all different so these heights aren't perfect for everyone and might not work for you. If sitting at both of these types of unit is a definite stipulation of your purchase then it'd be best to try to sit on one first, to try it out, before purchasing it.
